# KLONDIKE®

As a world-class brand, KLONDIKE is dedicated to quality and performance – bringing solutions to a broad range of industries and applications. Our offerings include heavy duty and automotive engine oils, gear lubricants, transmission fluids, hydraulic fluids, industrial and functional oils, greases, antifreeze and coolants, washer fluid and a selection of chemicals. With premium virgin based oils and protective inhibitors you get extended engine life in mobile applications and improved productivity in the workplace, even in the most extreme environments. KLONDIKE oils, lubricants and chemicals include our world-class retail product line through to a complete range of bulk industrial oils, greases and specialty fluids.

At KLONDIKE, we understand that reliability, durability, improved engine life and up-time are vital to your success. And with unlimited blending and formulation capabilities, we are able to meet almost every unique specification required in your industry. Our API and ILSAC registered lubricants are designed to guarantee OEM acceptance, improve fuel economy, and extend engine life. Additionally, KLONDIKE's exclusive Arctic Performance Technology delivers outstanding engine and equipment productivity in the most extreme weather conditions.

Our team provides consulting and training sessions and programs to empower our distributors and industry partners with the competitive advantage of a deeper knowledge and understanding of our oils, lubricants and chemicals. Dedicated to meeting the delivery needs of our customers, we have distribution facilities that are strategically placed across North America to cater to the time-sensitive nature of your industry.

# Heavy Duty Engine Oils

KLONDIKE heavy duty engine oils are formulated to assist in maximizing engine life and minimizing wear. While providing a protective film, heavy duty engine oils must work to disperse soot and reduce sludge in order to optimize engine performance. Our advanced processes and technologies enable KLONDIKE heavy duty motor oils to strike a balance between durability, emission control, and optimized drain intervals and improved outcomes for your equipment. Specially engineered with Million Mile Technology, they meet the needs of heavy duty diesel and gasoline engines operating under all service conditions. The exclusive KLONDIKE Arctic Performance Technology ensures improved reliability in extreme climatic conditions.

KLONDIKE premium quality automotive engine oils are formulated for optimum efficiency and are designed for use in modern, highly fuel efficient engines that are subject to increasing levels of stress such as stop-and-go city driving, frequent short trips, extreme high and low operating temperatures, extended idling and towing. KLONDIKE synthetic blend and full synthetic motor oils for passenger cars offer superior oxidation stability, extra protection against heavy load conditions, additional high temperature protection, and better cold weather properties than conventional motor oils. Additionally, KLONDIKE premium quality automotive engine oils are formulated under the newest technology and are certified under the latest ILSAC GF-5 and API SN specifications. This technology is also good for use in the prior ILSAC GF-4 or API SM specifications.

# Gear Lubricants

Tough operating conditions are no match for KLONDIKE gear oils. They are specially formulated for maximum protection, durability, and efficiency no matter what climate or conditions are prevalent. Only the finest technology available is used in manufacturing our premium synthetic gear lubricants. KLONDIKE robust formulations are designed for gears and differentials that place rigorous demands on fluid technology and require extreme temperature and pressure protection. Driveline components in today's automotive and heavy duty vehicles have become increasingly stressed by increased engine output, higher operating temperatures, and extended service intervals. KLONDIKE's advanced gear oil technology protects against severe wear while balancing fluid durability in heavy load conditions, including extended drain intervals when applicable.

KLONDIKE transmission fluids are formulated for use in a full range of automatic transmissions and provide premium shifting characteristics. Our full range of automatic transmission fluids offer smooth yet responsive shifting, long service life, and fuel efficiency. KLONDIKE transmission oils are engineered to provide improved performance, extended transmission life, as well as premium flow characteristics at very low temperatures and protection against oxidation, varnish and sludge at high temperatures.

# Hydraulic Fluids

KLONDIKE anti-wear hydraulic fluids are designed to operate in the most extreme conditions. Today, operating conditions require greater precision and pressure than ever before. While advanced systems do more work and are more responsive, they are also more vulnerable to wear and deposit formation when operated at higher temperatures and pressures. Highly tested KLONDIKE hydraulic lubricants are specially formulated with the finest base oils and an additive system that delivers unrivaled performance and protection.

BULK

The KLONDIKE family of industrial and functional fluids is formulated for exceptional performance and reliability using world-class technologies that have been trusted and proven by industry professionals for many years and is relied on by industry users all year round. Our bar and chain oil is of the highest quality and operates in extreme climatic - high or low temperature - conditions. It offers unsurpassed durability and performance for equipment in high heat conditions, and performs flawlessly in the logging and the saw mill industries that require the most robust and durable lubricant formulations in order to maximize efficiency and productivity.

# Greases

KLONDIKE produces a range of unique robust and tacky greases that provide premium lubrication in difficult operating conditions and are tailored to industry requirements for improved productivity. They are specially engineered for environments with extreme temperature requirement, moisture and dirt contamination, heavy loads, extended maintenance intervals and other conditions that impact performance. Our greases are created with the finest base oils and additives in order to provide outstanding tackiness, lubrication and protection. These formulations will guard against oxidation and wear in extreme pressure and high temperature applications.

## Antifreeze & Washer Fluids

The KLONDIKE antifreeze family is complete – our product selection covers all applications for vehicles including light duty automotive, marine, agriculture, and heavy duty on- and off-road equipment. As some specifications require phosphate-free antifreeze, we've created our Global Extended Life Antifreeze/Coolant and All Engines Antifreeze/Coolant formulas to be phosphate, silicate, borate, and amine free. These coolants use special chemistry and technology that extends the life of the corrosion inhibitor package so that it lasts for five years or 250,000 km (whichever comes first). Additionally they meet the specification requirements of most applications - old or new. KLONDIKE antifreeze is produced with 100% virgin glycol and designed to exceed the testing requirements on the complete range of ASTM (American Society for Testing and Materials) standards as well as the specifications of other major manufacturers.

## Industrial Chemicals

KLONDIKE industrial chemicals are created for high performance applications that call for a pure product that is ready to use and can operate in extreme conditions. With expert chemists and petroleum engineers, KLONDIKE has formulated a range of high quality chemicals for the specific industry demands of our customers. Available in small batch orders through to large bulk purchases, we understand the importance of real-time delivery of these products.
