Strength and Durability to Ensure Longer Life. Get genuine performance from genuine Spicer® parts. Spicer parts are designed, engineered, and manufactured to meet or exceed OE parts requirements, because they are OE parts, ensuring a precision fit with our full line of industry-leading axles. That's why Spicer is the name you can trust for top performance and durability.

Get Genuine Spicer Quality with Front Axle Shaft Assemblies.

What sets genuine Spicer front axle shaft assemblies apart from the knockoffs? Application specific design and engineering, quality materials, precision manufacturing processes, and statistically controlled testing processes are what differentiate Spicer products from competitors. Spicer parts are built to meet or exceed the application-specific original equipment (OE) specifications, so you can count on Spicer axle shafts and assemblies to deliver the same quality we bring to our OE axles.

Through heat treating and a slower quality scan rate, Dana is able to deliver a much more consistent and stronger axle shaft. In addition, the cold-formed rolled spline eliminates the need for machining, which can cause stress fractures and premature failures.

And not only are our axle shafts fatigue-tested to ensure consistent quality, 100% of our front axle parts are ultrasonically tested, so we're able to check for any internal cracks that regular magnetic testing can't reach. We're proud of our quality and consistency testing methods that also meet or exceed market standards—because when it comes to the performance of Spicer axles, there's no room for compromise.

Complete Axle Shaft Assemblies.

The genuine Spicer components in our front axle shaft assemblies are engineered for maximum strength and fatigue life that meet or exceed OE requirements—the knockoffs can't make that claim. A complete front axle assembly from Spicer includes the following:

- Inner shaft*
- Outer stub*
- Universal joint*
